Fletcher to Address Y

Engineer Selects Science, Religion As Wednesday's Devotional Theme

In conjunction with Engineering Week, Dr. Harvey Fletcher will discuss "Science and Religion" at Wednesday's devotional assembly.

DR. FLETCHER is a renowned scientist of this century. He is professor of physics at Brigham Young University. He has served for 10 years as president of the New York Branch of the Church of Jesus Christ of Latter-day Saints. In 1936 he was set apart as president of the New York Stake.

The distinguished scientist and engineer is noted for his contributions to acoustics, electrical engineering, speech, medicine, music, atomic physics and education. He received his early education in Provo schools, graduated from Brigham Young University in 1907 with a B.S. degree, continuing his studies at the University of Chicago, he worked with Robert A. Millikan, and together they isolated a single electron, measured its charge and demonstrated the atomic nature of electricity. This has contributed significantly to the edifice of electronics basic to the development of radio and television.

UPON COMPLETION of his studies at the University of Chicago, Dr. Fletcher was awarded a Ph.D. degree, summa cum laude, the first ever granted by that institution.

Physics Dept. of that university. Returning to BYU in 1911, he served the next five years as head of the Physics Department.

In the next 33 years were spent at the Western Electric Laboratories in New York and during the physical research at the Bell Telephone Laboratories.

Dr. Fletcher was the first man to deliver the Distinguished Lecture at the National Academy of Sciences. He received honorary degrees from 15 universities including the University of Utah and the University of California.

DR. FLETCHER found the American Acoustical Society and became its first president. Later he made an honorary member of the society, a distinction held by only one other man, Dr. Edwin Dr. Fletcher was a member of the American Institute of Electrical Engineers, Phi Beta Kappa and the National Academy of Sciences.

Philbrick Emphasizes Vigilance Fight Against Communism

by Judy Woolstenhulme
Universe Staff Writer

"The problem that faces us today in Communism is very real. Our unpreparedness . . . This unpreparedness is a product of our actual, social and moral drift," said Herbert Philbrick in day's forum assembly.

PHILBRICK CONTINUED, "The Communists have stated, we need one Communist in the right place in the right time. One Communist can be more dangerous than a whole lot of the Red Army."

Because the Communists are "Masters of Deceit" Americans have to be on the lookout for their duping and treachery. Philbrick stated that Americans must realize today that the United States is in World War III, and that the "conflict between Communism and freedom is the conflict of all time. On the outcome of this conflict depends the future of this country."

Philbrick, who for nine years led three lives—citizen, Communist underground worker and counterespionage—declared that "Communist Party was in fact a criminal conspiracy, a guerilla association . . . THERE ARE 32 million Communists in the world today control more than 300 million people. Fifteen years ago, in 1945, there were only four and one-half million hard-core Communists who controlled 180 million people. The Communists grabbed on the average of 1,000 square miles a day. Philbrick informed the students that the Communists feed on the hearts, minds and souls of people to change them, ordered, dedicated, steered members of the Communist army. The Communist is able to fool and to dupe the person because they put on a new label to the party doctrine. There are two Communist party lines, according to Philbrick. The first is told inside the secrecy of cell meetings, and the second is the public Communist party propaganda to dupe and deceive the public.

Dr. Harvey Fletcher . . . BYU Scientist speaks Wednesday

Engineers Schedule . . .

Films, Displays to Spice Week's Slate

Science films by the Belle Laboratories will be featured Wednesday as part of Engineering Week activities. Ted Crowther, chairman of the week, has announced.

SHOWN IN 260, 230 and 215 Eyring Science Center will be "The Alchemist Conspires," "Gateway to the Mind," "Unchained Goddess," "The Strange Case of Camille Ravin," "Hear the Manifold," and "Our Mr. Sun." The films will be shown continuously from 6 to 10 p.m.

More than an acre of displays are being prepared for the week by Brigham Young University. The displays include scientific and commercial companies throughout the West. Displays will be set up Friday from noon to 9 p.m. and Saturday from 9 a.m. to 9 p.m. in the Engineering Building.

Dr. Fletcher will be the featured speaker at the evening assembly. He will discuss "Science and Religion." He will also discuss "The Atomic Bomb." He will also discuss "The Atomic Bomb." He will also discuss "The Atomic Bomb."

A STORY FROM engineering students is that the team who invented the coil, Tuba, planned to place huge coils in the center of a town to light the night.

Dr. Fletcher will be the featured speaker at the evening assembly. He will discuss "Science and Religion." He will also discuss "The Atomic Bomb." He will also discuss "The Atomic Bomb."

DE-LIGHT-FUL—Frank Judd holds a fluorescent bulb close enough to a Telascope to pick up the electrical energy radiated by the coil. He receives no shock from the 250,000 volts because the frequency is so high that the currents pass over surface of his body. Coil will be on display Friday.

Like to Issue Declaration During Brazilian Visit

RAMEY AIR FORCE BASE, Puerto Rico, Feb. 23 (UPI)—President Eisenhower flies today to Brazil where he and President Juscelino Kubitschek are to issue a "Declaration of Brasilia" reaffirming inter-American cooperation as the best means of countering any Communist threat in this hemisphere.

One of the main purposes of the visit to Brazil will be to convince the people of that vast country that the United States regards them seriously as valued friends and allies. The "Declaration of Brasilia" is expected to do just that.

BRAZIL is the first official stop on the 15,500 mile South American journey that will carry Eisenhower also to Argentina, Uruguay and Chile before he returns to the White House in two weeks. He flew into this American commonwealth yesterday and received a warm welcome and a chance to relax.

The flight will be from this mighty United States air base to Brasilia, a miracle metropolis rising from the jungle as a new 20th century capital of South America's largest nation.

WAITING to greet him at the winning new, ultra-modern capital 60 miles inland from sophisticated and luxurious Rio de Janeiro will be the energetic hard-driving Kubitschek. They will discuss a broad range of hemispheric problems in talks in Brasilia, Rio and Sao Paulo.

Pros, Cons Of Unions Discussed

by Irene Brimigan
Assoc. News Editor

Fred C. Pieper, the right to work leader of the AFL-CIO Region 10, Colorado, Utah and Wyoming, and Ros Thoresen, manager of the Industrial Relations Council of Utah and author and sponsor of the Utah Right to Work Law which was adopted in 1955 discussed how well the Labor Union Law, the "Public Interest" Monday night in the Smith Fieldhouse.

THE DEBATE was sponsored by Phi Kappa Phi, BYU's national honorary scholastic fraternity. Pieper began the debate by stating that the simple philosophy of labor unions is believed and practiced by being my brother's keeper. He said that this is the fact that labor unions have provided the best living standards for the greatest number of people, he said.

He said that labor unions are the best way to get the most out of a worker. He said that labor unions are the best way to get the most out of a worker. He said that labor unions are the best way to get the most out of a worker.

THORESEN began the discussion of the debate by stating that labor unions are the best way to get the most out of a worker. He said that labor unions are the best way to get the most out of a worker.

He said that labor unions are the best way to get the most out of a worker. He said that labor unions are the best way to get the most out of a worker. He said that labor unions are the best way to get the most out of a worker.

Weber's Opera, 'Der Freischutz,' Start Wednesday

Carl von Weber's famous opera, "Der Freischutz," will be presented by the University Workshop Wednesday night at the Smith Auditorium. The production will be in the Smith Auditorium, and will run for a total of 10 performances. The opera is under the direction of Dr. Dan A. Earl. The cast includes Rodney Zabriskie, Nancy Emery, Louise LeVar, Brandi Carter, Ren Samelson, Ken Wicks, Thomas Jones, Wayne Keith and Darrel Hayden. "Der Freischutz" means "freedom" and is a story of a man who is persecuted by a tyrant. The story is set in the 15th century and is a story of a man who is persecuted by a tyrant. The story is set in the 15th century and is a story of a man who is persecuted by a tyrant.

Salute to Engineers

It is hard to visualize, many times, the component parts of any complex entity. At a dance for example, when the whole ceiling is enclosed with streamers hung so closely together that they appear a solid mass, it is hard to realize that each piece of crepe paper was stapled together and put carefully in place.

It is even more difficult, when viewing some great structure to visualize the hundreds of thousands of man hours that have been spent, not in laying brick on brick or smashing rivets into place, but at drawing boards and in testing laboratories.

Long before a cable is placed on a bridge or a bit of cement laid down for a street, engineers have been calculating, planning, devising the necessary steps for the operation. Many times we fail to take account of these efforts as we see the great steel suspension bridges or busy four lane highways.

One tends to regard the calculations an engineer makes on his slide rule or writing pad as some sort of esoteric doodling. When actually the figures represent practical designing to keep the water out of your basement by figuring out adequate drain, making you can open your door the lid outside rather than inside the can, or keeping a supersonic rocket from burning up in space.

For one such as we who has trouble dividing an orange into equal pieces or adding a column of figures, the work of an engineer is a sort of incomprehensible magic. The engineer transforms vague forms—cubes and roots and squares—into masterpieces of steel, concrete, plastic, wood or fiber.

So to the men who plan the roads, the men who build the bridges, the men who fire the rockets and launch the ships, we pay tribute, not just during a certain week, but throughout the year.

Let's Buy the Wye

Brigham Young University's literary magazine, The Wye, goes to press this week with a number of significant changes. First, this issue of the Wye is one of two this year instead of one of three as in past years. Second, because the magazine's budget was drastically cut, the Wye will carry a price tag.

WHY THE CUT

Not debating the rightness or wrongness of budget cut, we should, perhaps, discuss some of the reasons which led to the cut.

Stating it frankly, a lot of people have said that the Wye was "way out" as far as the majority of the student body was concerned. Writers have been accused of writing over the heads of everyone but a select number of long hair intellectuals. Coming under most direct criticism were modern poetry and modern art, printed in the magazine.

Perhaps one of the biggest reasons that modern art makes us uncomfortable is that it doesn't fall into any of the arbitrary sections of our mental filing cabinets. We are used to putting things away, without mental strain, saying, "This is good, this is bad, this is a house, this is a tree, this is a 'good' guy, this is a 'bad' guy."

Then we see something that we can't pin down without studying and interpreting, so it goes automatically into "bad" file with all the other things we don't understand. Then we can be safely back on "solid ground" by having stated a definite opinion.

GOOD EXPERIMENT

It might be interesting and enlightening sometime to sit down with a piece of modern poetry which is "way out" and give it five minutes' contemplation.

This issue of the Wye will have some "think pieces" but it will also carry articles, stories and conventional poetry of general reader interest.

As university students we should be interested in all phases of intellectual endeavor. A 25 cent outlay for the Wye magazine is a nominal sum to find out what BYU's writers and artists are doing.

Uruguayan Finkle Set To Take Tour

by Francis L. McCarthy
United Press International

Editor's note: The tiny country of Uruguay, South America, figured prominently in the news recently when the 1954 state elections were held. In the 1954 state elections, the Uruguayan Governor Pat Brown that afternoon was assassinated. Following is an article by the United Press International which gives further details about Uruguay.

Here is a Latin American paradox:

The hemisphere's smallest country—about the size of South Dakota—has one of its highest standards of living. It is a nation where sheep outnumber humans in the population county by 11 to 1.

SUCH A country is Uruguay where President Eisenhower formally closes out his four-nation, 10-day air tour of South America. He arrives in Montevideo March 2 and leaves March 3.

Even more paradoxical: despite its diminutiveness, Uruguay is probably the only one of the countries Eisenhower will visit which is not likely to ask him for direct American aid.

URUGUAY'S economy is based on livestock. But its present relative economic stability is attributable to U.S. crop surpluses, principally wheat, which it has resold and, from the profits, offset drought-inflicted losses of the past year.

Not only is Uruguay paradoxical—it is a study in political contrast.

IT IS REGARDED as South America's first "welfare state." It pioneered old-age assistance, the eight-hour work day and free medical services. Yet it is one of the most conservative and stable of the American Republics.

In 1951, the people placed the executive power in the hands of a nine-man national council of government to prevent the development of dictatorship.

YET, CONVERSELY, Uruguay has backed the admission of Red China in the United Nations; it is one of only three Latin American countries with formal diplomatic relations with Soviet Russia—and between 10 per cent and 12 per cent of all of its trade is with communist countries.

There are no outstanding problems at present between Uruguay and the United States. Ike is assured of a warm welcome. If the Trotskyist element in Uruguay makes itself heard in opposition to his visit, it will be because this is a nation famed for tolerance when it comes to public expression of political opinion.

URUGUAY'S 2.8 million population is largely (90 per cent) of European descent. From the ranks of these immigrants came Jose Artigas y Ordonez, one of the hemisphere's all-time intellectual greats and the "father of his country" in progressive thought.

Uruguay may want U.S. financial aid at some time in the future. But this topic will not be an important item on the agenda of Ike's brief state visit.

Rather, the tiny country's principal complaint will be that Eisenhower is devoting such a brief span of time to his stay in beautiful Montevideo, city of more than a million population and hub of all Uruguayan business and industrial development.

TAUSIG MINERS—Pledges of the Tausig Social Unit as part of their initiation period in the welfare coal mine the Church of Jesus Christ of Latter-day Saints in Car County. Coal from this mine is distributed to needy families throughout the Church.

Social Units Accentuate Positive Rush Method

Editor's note: In Friday's Daily Universe appeared an editorial which took serious social units to task for not observing the newly adopted rush procedure. In the following article, the chairman, acting chief justice of the I.O.C. court, details some of the positive, uplifting programs which units followed.

by Craig Christensen
Written for the Universe

Men's evil manners live in brass; their virtues We write in water.

—Shakespeare

And so it was that the great master penned a truism. And yet, one might wonder, does the incorporation of this description of human nature into Shakespeare's "Henry VIII" thus make of it a goal and ideal to be desired. Unfortunately, a thorough reading of last Friday's Universe might lead one to think so.

HOW OFTEN have we heard men and women of good faith—possibly even the Universe editorial writer himself—pay lip service to the quip: "accentuate the positive?"

But then we turn to the edition of Friday last, there, written in words as telling and profound as if cast in brass, we are exposed to the great evils of social unit rush at B.Y.U., while somewhere in the unprinted background the constructive accomplishments of the initiation week fade like ripples in a stream.

IT'S "DOWN With Social Unit Week" at B.Y.U. once more as innuendoes and half-truths about mystical hazing practices pervade the undercurrent, while a blitzkrieg of verbal incendiary bombs aimed at final extermination of the cancerous unit institutions crush forth from the more vociferous critics.

There can be no doubt that abuses have occurred in the newly reformed rushing procedures. With changes as significant as those employed this year, it is only natural that some resistance remains.

AND YET any real objective analysis cannot help but reveal a concerted effort on the part of

nearly every unit to cautiously observe the new traditions. The system's supporters and critics alike have striven to honor the pledge made: university community that could and would make the institutions workable.

For a moment then, let us attempt to pay homage to the admonition, "Accentuate the positive."

A VISIT to any of a score of early-morning meetings have revealed social unit masses abandoning years of tradition as the paddle—symbol of a proven-workable system building unity—was ready to disuse.

But even more important the newly installed "ch building" practices designed to uplift pledges. Study a learning of unit history traditions, thought-provoking evaluation analyses—the high points of Rush.

AND FINALLY, the redesigned to give service, variety, church, and com can not be overlooked. Kappa Delta, Tau Sigma, to name only a few, spent hours at the State Hospital, a salute to us.

A special round of applause was earned by the Tau Sigma work at the Church mines in Carbon County working hand in hand with members 32 pledges that brotherhood and unity be synonymous with service, constructive accomplishment.

So let's take our hats off to the successful rush, and in so make an effort to have accomplishments the words are cast in brass.

The Old Time

Y Students Need White, Not Yellow, Sheets to Register

Students piling class cards for spring quarter will have to present the white sheet given them by their adviser.

The Daily Universe erroneously reported yesterday that students would have to present the yellow sheet. However, the yellow sheet will be retained by the adviser and the white one used to get class cards.

Students must see their adviser before they can register. Spring quarter registration will begin next Monday and continue for two weeks in alphabetical order. The individual colleges will handle advisement sessions.

Herbert Philbrick... warns against Communist infiltration

Philbrick Claims Reds Teach 'Militant Atheism'

by Pat Middleton
Associate Campus Editor

He was a humble, amiable man who persisted in taking moment to converse with each student who stood in line for an autograph a copy of his famous book "I Led Three Lives."

HERBERT PHILBRICK, Monday's forum speaker, who for nine years worked as a Communist for the FBI, never seemed to tire of questions. By 11 a.m. the bookstore had sold its entire stock of 150 copies of his book.

"As long as they are kept warm, and their body heat combined, it is best to wait for the ambulance before moving them," he went on.

IN CASE OF POISON, Waters said, the first thing to do is to dilute it with as much liquid as possible immediately, and then the person must be forced to vomit, except in cases of acid, strychnine, or kerosene poisoning.

Philbrick was believed to speak to a Russian Government class in political science taught by Dr. Melvin P. Mabey.

"MONOLITHIC Unity is one of the secrets to the success of Communism," Philbrick told the class. "Communists realize they will have to follow the same direction to accomplish their goal of world domination. The party as unity and good integration and coordination and all parties in all countries come under the same control and do not deviate from that control," he said.

Philbrick assailed the field of mass communications whose leaders have allowed, through ignorance, the seeping of Communist influences.

He emphasized the need for newsmen to realize the importance of accuracy and presentness in reporting news of this type.

Directing his remarks to young people as a whole, he said, "You must first learn the tactics and strategy of Communists so you can spot them. Support your National Students Association, for remember, your youth organizations are their favorite targets."

"GET THE EVIDENCE," he urged. "As you are doing now, learn all you can about the nature of the Soviet Union by reading books like the Overreaches. What We Should Know About Communism," and others, "The Naked Communist" by W. Cleon Skousen.

'Atomic Power Our Future'--Morris

by Rita Wheeler
Universe Campus Editor
"Atomic power is our future," asserted E. W. Morris at an Engineering Week discussion-lecture Monday night.

Morris, who is Pacific Coast regional manager for Westinghouse, is in charge of engineering and service activities in the Apparatus Division at Westinghouse in 11 Western states.

IN HIS presentation of "Your Atomic Future" Morris discussed the development of atomic power in the Shippingport, Penn., atomic project. The project, which will help in the achievement of

electric power, is the first of its kind in the world. Three years and three months after the project began, the plant was ready and ready to supply power for Pittsburgh.

Morris told the audience of engineers of the difficulty involved in doing all the atomic power by remote control to avoid contact with radio-active material. The nuclear core was installed at Shippingport in 1957.

THE USE of atomic power is no longer merely theoretical, Morris pointed out. After World War II and the development of the atomic bomb, Westinghouse and other laboratories were busy research to find peaceful uses for atomic power, he said.

The harnessing of nuclear energy for nuclear power was begun then, Morris added.

Light from banks of tubes and ceilings, air conditioning, and motors, he said, are now effective mass production in factories, increased efficiency in astronomical telescopes and amplification of light for medical X-rays are all developments of thermoelectricity which Morris said is used. Thermoelectricity will undoubtedly find its place in the home," Morris pointed out.

He added, however, that "we must move ahead with a degree of exactness that we have never used before."

Clinic Chairman Says Shock Big Factor in Accident Deaths

by Jeri Smith
Universe Staff Writer
Shock is a big factor in the accident death rate," said Chairman Ray Walters of the Health and Safety Education department to visiting policemen of the law enforcement clinic being held at Brigham Young University.

LECTURING on principles of first aid, Walters covered the policeman's duty in cases of shock, serious bleeding, chest and head injuries, burns, poisons, artificial respiration, and splints. "One of the pitfalls of first aid," he continued, "is the false notion that the injured person must be bundled into a car and taken to a building to get warm."

"As long as they are kept warm, and their body heat combined, it is best to wait for the ambulance before moving them," he went on.

IN CASE OF POISON, Waters said, the first thing to do is to dilute it with as much liquid as possible immediately, and then the person must be forced to vomit, except in cases of acid, strychnine, or kerosene poisoning.

Biblical Scholars Give Conference

A complete range of New Testament studies, including recent discoveries, opinions and research of prominent Biblical scholars will be presented at the New Testament conference Saturday. The program begins at 8:30 a.m. in Multi-purpose Room of Smith Family Living Center.

A special tuition rate of \$2 will be charged students and the regular price to the public is \$6. Students may register in advance between 8 a.m. and 5 p.m. each day at Young Apartments.

SQUAW VALLEY, Feb. 23.—(UPI)—The United States, in the midst of another speed skating controversy, seemed sure to get out of the olympic also-ran category today on the shining silver blades of Carol Heiss.

Queen Carol, three-times world

champion and already leading her 25 competitors by a wide margin, should pick up the gold medal in ladies' figure skating. And that would put a yank on the top pedestal of the victory stand for the first time in the games.

THE U.S. TEAM, point-blank yesterday in the unofficial scoring, also could pick up a bronze medal in this competition if Barbara Ann Finkel of Temple City, Calif., can hold her third place standing after the compulsory figures were completed yesterday.

And there is a chance that one of the beauty queens of the U.S. giant slalom ski team could win a medal. It might be pigtailed Penny Pitou of Laconia, N.H., All-American beauty Betsy Sneyd of Norwich, Vt., or Linda Meyer of Mammoth Lakes, Calif. All three have a strong chance.

BUT THERE seems no chance for victory in the other two events—the men's 15-kilometer cross-country, and the ladies' 3000-meter speed skating.

The speed-skating members of the U.S. team are in rebellion—and it is doubtful that the Yankee skaters can be depended on to give much of a challenge to the crack athletes from Russia and the other European nations.

SEVERAL of the U.S. team members complained to Irving Jaffee, former U.S. Olympic champion writing for United Press International, that they were getting no attention from their team coach or manager. Jeanne Ashworth, Wilmington, Mass., who has made the best showing of the U.S. skaters, told Jaffee:

"I COULD have been helped a lot if I had a coach and manager here who knew something about Olympic skating or were really interested in the welfare of the team."

She said the only coaching she had received was from Russian Klara Guseva, winner of the 1,000 meter race. Miss Ashworth finished 8th in this race, third in the 500 meters and 11th in the 1,500 meters.

"Most of the time we could

only practice in the chill of almost zero weather in the evenings at 9 p.m.," complained Gorman German, "and we were very rarely seen by our coach manager when we trained."

MEANWHILE, the Russ pushed ahead in their rout of the unofficial team championship. They had chalked up 10 points against a surprise from Gorman German, 3 and 48. Sweden was next with 2 and the U.S., which failed to a single point yesterday—fourth with 16.

But there were plenty of European heroes yesterday. J. Vuarnet, a 27-year-old French hotel man, won the men's downhill on the key slopes of Squaw. Miss Guseva, a 22-year-old Russian school teacher, won the 1000-meter (about 1/2 mile) speed skating; and Georg Thoma, a 34-year-old, won the 500-meter.

The unofficial point standings in the Winter Olympic Games (points are awarded on the basis of 10 for a first place, 5 for second, 3 for a third, 2 for fourth, 2 for a fifth and 1 for sixth):

Country	Points
Russia	10
Germany	3
Sweden	2
United States	16
France	0
Switzerland	0
Canada	0
Austria	0
Poland	0
Finland	0
Norway	0
Japan	0

Golden Bears Maintain Top Spot in Basketball

NEW YORK, Feb. 23.—(UPI)—California turned into the home stretch in the race for the 1980 National Collegiate basketball championship today with a slight lead over Cincinnati in what is beginning to look like a two-horse race.

With just two weeks remaining in the regular season, the United Press International board of coaches today rated California the No. 1 team in the country for the fourth straight week.

AND PETE Newell's defense-minded Bears received a slight boost in their margin over Cincinnati's Oscar Robertson and Co. All told, 24 of the 35 famous coaches who comprise the board picked California on top, while eight voted for Cincinnati, two for Ohio State and one for Bradley.

On a points basis, that gave California 332 points—lead of 21 points instead of the 12 the Bears held last week.

THIS WEEK'S ratings marked the fifth straight week that the same teams have been ranked among the top 10. The only change from last week's standing was the raising of Utah from sixth place to fifth place and the dropping of West Virginia from fifth to sixth.

Rounding out the top 10 in or-

der, were Utah State, Georgia Tech, Villanova, and Texas A. & M.

Coaches on the board vote for the top 10 teams in the nation each week and their ballots are compiled on a basis of 10, 9, 8, 7, 6, 5, 4, 3, 2, 1 points for votes from first through 10th. Voting this week was based on games played through Feb. 20.

The United Press International major college basketball ratings (first place votes and win-loss records through Feb. 20 in parentheses):

Team	Points
1. California (24) (20-1)	332
2. Cincinnati (5) (20-1)	311
3. Ohio State (3) (19-2)	275
4. Bradley (1) (21-3)	249
5. Utah (20-2)	156
6. West Virginia (21-4)	120
7. Utah State (19-3)	92
8. Georgia Tech (20-4)	74
9. Villanova (17-3)	60
10. Texas A. & M. (17-3)	58
11. St. John's (N.Y.) (40-12)	48
12. North Carolina (28-18)	35
13. St. Bonaventure (25-14)	34
14. Auburn (18-17)	33
15. Wake Forest (14-18)	32
16. Dayton (10-19)	28
17. Kansas (10-19)	27
18. Others—Indiana, Miami (Fla.) and Kansas, 4 each; Holy Cross, 3; Notre Dame, Providence and Detroit, 2 each.	

Joe Morton . . . will be a starter for Utah Thursday.
